

Lift ID™ Automated Inspection and Compliance System

Kwik-Lok™ Lifting Pin

Exclusively from Jergens, **Lift ID™** combines the power of RFID, the ease of mobile computers and the convenience of the Internet to automate the entire tracking and reporting process. This two part system combines rugged hardware and powerful software to simplify your workplace safety compliance program.

The embedded RFID tags on Jergens' lifting products provide a quick and efficient way to identify and track equipment in the field. The RFID tag is scanned and **Lift ID™** Software accesses our secure website to track the manufacturing and test data for that particular hoist ring. Safety testing, repair histories, inspection certificates and more are immediately accessible from anywhere using web-based administration.

Lift ID™ is available with all Jergens lifting products.

Simply add an "F" to the end of the part number when ordering. Example: 23414F

SP2000™

Forged Center Pull™

Side Swivel™

Center Pull™

Side Pull (Traditional)™

Swivel Eyebolt™

The rugged RFID tag is engineered for service even in the most demanding environments. **Lift ID™** is available with all Jergens lifting products, including **Kwik-Lok™** Lifting Pins.
